

## Distribution

Central Asia, Western Asia, North Africa

**Adult Size** 

150 - 180cm (4.9 - 5.9 foot)

Life Span

25 years

Experience

Moderate

Handlin

Will tolerate some handling

#### Natural habitat

Blood Python's inhabit rainforests, marshes and swamps in the vicinity of riverbanks and streams

### Housing

Blood Pythons do best within a wooden vivarium because wood is an excellent insulator of heat and so a wooden vivarium will make it easier to control the crucial temperatures required inside the habitat. The minimum enclosure size for an adult would be 121x60 x60 cm (48x24x24 inches) this allows sufficient length to allow for the creation of a temperature gradient.

## Heating

Blood Python's will need a temperature range of 26.5-31°c (80-88°f)

Basking spot maximum	Ambient daytime range	Ambient night-time range
31°c (88°f)	26.5 -27.8°c (80-82°f)	26.5°c (80°f)

The basking and ambient temperatures are easily achieved using Reptile Systems Basking Spot Lamps in combination with a Reptile Systems Medium or Large Black Clamp lamp.

If additional night-time heat is needed this can be achieved using a Reptile Systems Ceramic Heat Emitter Lamps in combination with a Reptile Systems Medium or Large Black Clamp lamp.

Always ensure that heating products are run through a suitable dimming thermostat and ensure they correctly caged off so that your animal can not burn itself.

#### Lighting

Blood Pythons fall under zone 1 in the Ferguson scale this ranges from 0-1.4 UVI the ideal photo period would be 12 hours with all the lights on and 12 hours with all the lights off.

-\O-

The recommended UVI are easily achieved using and Reptile Systems Zone 1 T5 / T8 Lamp.

#### Substrate

A wide range of substrates can be used but for a naturalistic enclosure a mix of sand and soil with the addition of orchid bark / cypress mulch and leaf litter to add interest and textures for your animal.

## Water / humidity

Blood Python's should be provided with fresh water daily, in a reasonable sized bowl with is heavy enough that your pet can not tip.

Blood Pythons require an ambient humidity of 60-70%.

#### Diet / Nutrition

Blood Python's are carnivores in the wild they will eat a range of prey including lizards, birds, and rodents. In captivity Blood Pythons should be offered an appropriately sized prey item it is usual for people to offer mice or rats but if you can offer a variety of prey including quail, chicks, mice, rats, multimammate and gerbils your animal will benefit from a more varied diet.

#### Handling

Blood Pythons can be handled, the temperament of each animal can vary so you will have to use your own judgment as to how much handling, if any, your individual pet will tolerate. It is worth keeping in mind with all snakes they should not be handled 2-3 days after feeding. With any new reptile it is suggested that a 2 week settling in period is given in which handling does not take place. Handling should be limited to 20-30 minutes at a time, so your animal does not get too cold.

# Suggested Reptile Systems Products

Medium / Large Black Clamp Lamp
Multi directional ceramic lamp fitting with reflector.
Basking Halo Spot
Provides UVA and heat.
Zone 1 T5 lamp
UVB fluorescent full spectrum lamp, requires a ballast unit.
Zone 1 T8 lamp
UVB fluorescent full spectrum lamp, requires a ballast unit.

Zone 1 Eco Unit

UVB fluorescent full spectrum lamp, reliable electronic controller, and reflector kit.

T8 Electronic Controller
Flicker free ballast unit for T8 lamps.
Proten New Dawn LED
LED light source to support live plants.
Ceramic Heat Emitter
Perfect from creating ambient heat with no light
